

Reform of legislation EU seed market

EU Seed marketing legislation

The current seed legislation it's based on 12 directives

Productivist paradigm and industrial criteria:
uniformity and stability

Market access only for industrial seeds

- Diverse and resilient seeds cannot respect those criteria
- Less bio-diversity in the farms
- Dependency of the Farmers to agrobusiness
- No agroecological innovation

New EU seed marketing reform

- Switch from directives to regulation (one common regulation for all 28 Member States)
- Strengthening of the current system
- The problems of biodiversity and farmer rights still remain
- Need to campaign

Monsanto and the Seed legislation

- Chemical and seed giant
- Market strategy and huge genetic resources bank
- Patent and IPRs legislations
- International trade agreement to speed up the authorization for new biotech products

What can we do?

Reclaim our seeds!

- Saving our seeds
- Buying diverse-resilient and free from IPRs seeds
- Join the seed campaigns:
 - No patent on seeds!
 - and the campaigns for a better seed marketing legislation

Food sovereignty starts from ourselves!
